PROFESSIONAL SUMMARY

I'm a FullStack Engineer with 5 years of experience, specializing in Frontend development. I pride myself on my strong sense of ownership and tenacity, consistently delivering projects from initial architecture setup to polished final products. I'm experienced in leading teams, fostering collaboration, and driving technical excellence to deliver outstanding user experiences and robust solutions

EDUCATION

University Mediteran
Bachelor's, Software Engineering

January 2018 - January 2021

PROFESSIONAL EXPERIENCE

Vega IT

Frontend Engineer

Novi Sad, JC, Serbia

October 2019 - Present

- Successfully delivered a trip planner mobile application made in React Native from start to finish, helping the client publish it one month before the deadline.
- Successfully delivered biometric validation platform while helping clients raise bids from investors by consistently delivering successful demos.
- Helped the company grow from 8 to 25 people in a year by being part of the interview process for front-end candidates.
- Set up front-end architecture for multiple projects that my colleagues worked on, helping them work more efficiently.
- Gathered big domain knowledge in hospitality and biometrics.
- Participated in the company's front-end internships program, where under my mentorship 70% of interns became contributing team members.

Omnitech IT

Frontend Engineer

Podgorica, Montenegro

October 2018 - October 2019

- Worked solo on the front-end part and successfully published a food delivery platform that is now being used by 1000s of users.
- Worked directly with designers and gave them my input to create high-converting landing pages with perfect SEO.
- Worked solo on a Digital waiter app and delivered it to be used by 10s of restaurants in my city.
- Worked on a component library which made our website building significantly faster.

PROJECTS & OUTSIDE EXPERIENCE

Real estate website builder platform - [Link to project](#)

Fullstack Engineer & Founder

- A robust, multi-tenant CMS platform that allows real estate agencies and agents to effortlessly build and manage their websites without writing code.
- Built with a modern tech stack, including Next.js for dynamic website rendering, Tailwind CSS for rapid and consistent styling, and Prisma ORM combined with NeonDb for scalable and performant data management.
- Implemented Passport.js for flexible authentication, enabling secure access and user management across multiple tenants.
- Integrated AWS S3 for efficient media storage and retrieval, ensuring high availability and seamless content delivery.
- Leveraged Tanstack Query and Tanstack Router in a Vite-powered React Dashboard, significantly enhancing frontend responsiveness and developer productivity.
- Developed a custom CLI for npm workspace scaffolding, dramatically speeding up the setup and maintenance of the project's modular architecture.
- Architected using a slices-based modular approach, promoting highly maintainable, reusable, and isolated UI components.
- Core Features:
 - Multi-Tenancy: Allows multiple clients to securely manage their websites independently on the same infrastructure.
 - Website Builder CMS: Offers intuitive drag-and-drop interfaces, customizable templates, and real-time previews for non-technical users to build professional-grade websites.
 - Authentication: Provides secure, scalable user authentication and authorization through Passport.js, ensuring tenant isolation and security.
 - Real Estate Management: Robust management system for listings, enabling easy CRUD operations, detailed property filtering, and advanced searching capabilities.

- Built with Next.js, Tailwind, Zustand, Prisma, NeonDB, ShadCN, AWS S3, Passport.js, Tanstack Query, Tanstack Start, Express.js, Custom CLI

Biometric Validation Platform @ Daon

Remote

Frontend Engineer

- A multi-tenant platform that allows tenants (banks, e-commerce, etc.) to validate their users
- through verification of their face and identity documents like passports, id cards, etc.
- Used Camunda.js which allowed tenants to orchestrate their validation process with no code.
- Developed using Styled Components for 95% CSS styling to ensure proper CSS scoping.
- Packages for capturing faces and documents are using custom-built SDK and WASM modules
- which helps achieve validation in <2s.
- Made the initial decision to use the Monorepo approach with NX which improved our
- efficiency in the long run.
- Utilized NX Rollup generator to create a stand-alone document validation package that can be sold as a separate product.
- Utilized Storybook which allowed our developers to test out features faster, without setting up the whole project, which improved our efficiency dramatically.
- [Link to project](#)

Trip planner mobile application and web platform

Remote

Frontend Engineer

- A mobile application made in React-Native that allows users to plan the complete itinerary for their trip.
- The users can choose to travel by plane, train, rent a car, book a hotel, book an airport lounge, etc., and finally pay, all within the app. While the Travel Partners can manage their bookings through the Admin platform made in React.
- Created a component library similar to MUI, but for React-Native, which allowed for rapid development and delivering the project 1 month before the deadline.
- Set up a NX Monorepo, allowing us to share types and common React business logic between
- mobile applications and admin platforms which allowed us to complete the whole platform in <8 months.
- Used SCSS generators to create a custom utility class library which sped up the styling of the Travel Partner Platform.
- Set up online checkout with Stripe SDK to allow users to securely pay for the booking, within the app.
- Utilized Firebase Distribution to send out our app to be tested by the QA testers.

SKILLS

Skills: Next.js, React.js, TypeScript, Tailwind, Zustand, React Native, Jest, AWS, Node.js, Prisma, Drizzle, Three.js, Shadcn, Nginx, Vue.js, Nuxt.js, Firebase, Storybook, Git, HTML/CSS, LLM, Passport.js, Tanstack Query, Tanstack Router

Languages: Serbian

HACKATONS

I strongly believe in participating in as many Hackatons as possible, as they are good practice for our pure coding as well as 'brainstorming' skills. Because of that we decided to join <https://rochekakaton.me/>, where we won the first place and prize of 5000 euros.

- Built with Node.js, Nuxt.js and Tailwind in 2 days
